

Argo AI

Argo AI is a technology platform company that is working with leading automakers to deliver a fully integrated self-driving system that can be manufactured at scale for safe and reliable deployment in ride sharing and goods delivery services. We are developing “self-driving” technology according to the strictest interpretation of what the Society of Automotive Engineers (SAE) calls “Level 4” automation: a system that can drive a vehicle — under specific conditions — that does not require passenger supervision.

By partnering with academic communities and trusted automakers, we’re uniting the latest advancements in machine learning and computer vision with over 100 years of hardware development, safety engineering and manufacturing expertise.

With the support of our first customers and partners, Ford, and soon, Volkswagen, our self-driving technology is poised to move people and goods worldwide.

Overview

Geographic Region: Northeastern US

Industry: AI, Autonomous Vehicles
